Summary

Software Engineer with a graduating score (92.25 percent, First Class) and hands on experience building AI driven, web, and simulation based systems using React.js, Node.js, ASP.NET Core, Python, n8n, and AnyLogic. Comfortable owning a project end to end, from requirements and data modelling to deployment. Seeking to apply strong problem solving and full stack skills to real world software challenges.

Education

BS Software Engineering, University of Gujrat

Aug 2022 – Jul 2026

CGPA 3.69 / 4.00, 92.25 percent, First Class

Gujrat, Pakistan

Major Coursework: Software Engineering, Software Project Management, Software Design and Architecture, Software Quality Engineering, Database Systems, Operating Systems, Computer Networking, Data Structures and Algorithms

Projects

LegisCounsel, AI Based Legal Advisory System

Sep 2025 – Apr 2026

- Designed and developed an end to end AI powered legal advisory platform delivering preliminary legal guidance and case specific insights through natural language queries
- Built a Retrieval Augmented Generation (RAG) pipeline using ChromaDB and an automated document ingestion pipeline for context aware AI responses

Technologies: React.js (TypeScript), Node.js, Express.js, MongoDB, Python, ChromaDB, RAG

GearShare, Peer to Peer Tool Rental Platform

Sep 2025 – Mar 2026

- Built a full stack marketplace enabling community members to list, discover, and rent tools, with real time listings, availability tracking, and secure payments
- Designed RESTful APIs for authentication, inventory, bookings, and rental transactions, plus a review and rating system, architected for scalability

Technologies: React.js (TypeScript), Node.js, Express.js, MongoDB

Hospital Appointment Scheduling Simulation, Research Paper

Jan 2025 – Jun 2025

- Analyzed inefficiencies in manual hospital scheduling through a structured survey of 2,000 respondents, identifying key bottlenecks such as long queues and double booking
- Modelled the existing workflow using BPMN 2.0 and built a Discrete Event Simulation in AnyLogic to quantify baseline performance
- Designed and tested an online, AI assisted scheduling system that cut patient waiting time by over 50 percent, statistically validated using ANOVA

Technologies: AnyLogic, Discrete Event Simulation, BPMN 2.0, Statistical Analysis

AI Powered Workflow Automation Systems, Freelance (Fiverr)

Jan 2026 –Present

- Built AI powered n8n automations: a WhatsApp appointment booking system synced with Google Sheets and Calendar, and a lead generation system scraping Google Maps and websites into Airtable

Technologies: n8n, WhatsApp API, Google Sheets, Google Calendar, Airtable, Web Scraping, API Integration

Skills

Programming and Development: C++, C#, JavaScript, HTML, CSS, Bootstrap, React.js, Node.js, SQL, Python, ASP.NET

Automation and AI Workflows: n8n, Workflow Automation, API Integration, Web Scraping, AI Agents, RAG Pipelines

Simulation and Modelling: AnyLogic, Discrete Event Simulation, BPMN 2.0, Business Process Engineering

Testing and QA: Manual and Automated Testing, Test Case Design, Selenium, TestNG, Postman

Tools: Git, Microsoft Office, Virtual Environments

Soft Skills: Critical Thinking, Communication, Problem Solving, Team Collaboration, Adaptability, Leadership

Languages and Achievements

Languages: English (Professional), Urdu (Native), German (A1 Level)

Achievements: Merit Based Scholarship recipient for academic excellence at University of Gujrat and Punjab College Gujrat (2020 – 2022)
